

Basic Data Visualization

Internship

Codveda Technology – Data Analytics Internship

Submitted By

Name: Pawan Kushwah

College: G H Rasoni International Skill Tech University, Pune

Branch: B.Tech Artificial Intelligence & Data Science

Objective

The objective of this project is to visualize the Iris dataset using different graphical techniques to better understand the data distribution and relationships among features.

Dataset

Dataset Name: Iris Dataset

Tools Used

- Python
 - Google Colab
 - Pandas
 - Matplotlib
 - Seaborn
-

Visualizations Created

1. Bar Plot

Displayed the number of flowers in each Iris species.

2. Scatter Plot

Visualized the relationship between sepal length and petal length for different species.

3. Line Chart

Displayed the average sepal length across the three Iris species.

Results

- Species distribution was visualized using a bar chart.
 - Relationships between numerical features were analyzed using a scatter plot.
 - Feature trends were visualized using a line chart.
 - All charts were exported as images.
-

Conclusion

Data visualization provides a clear understanding of the dataset. Different plots help identify distributions, relationships, and patterns, making the dataset easier to interpret.
